If you're computer is connected, YOU are under attack. Students will explore the methods of attack (IE. keyloggers, spyware, Trojans and viruses), where attacks can come from (email, IM, network connections, P2P, removable storage, web pages), and how to try and keep protected without going broke. Learn to protect those computers and data locally, on the LAN and on the Internet. And if that protection breaks down, students will delve into getting it cleaned up.

Course objectives.

- To provide the class with an in depth exploration of security threats through lecture and exercises.
- To explore various methods of protecting computers and data.
- To develop computer literacy.
- **To address the *class'* questions.**

Schedule

- 9:00 registration
- 9:30 morning session with break
- 12:00 lunch
- 1:00 afternoon session with break (may begin earlier if class is ready)
- 3:30 conclusion
